(Other related questions from the same email)

o If there are multiple grammars activated and a noinput or nomatch occurs, what grammar is placed in the grammar attribute of <result>?

o Clarify that <instance> is present and empty if <nomatch> or <noinput> occurred.

msg127 (view) **Author: dburnett** **Date: 2006-03-27.16:24:52**

From Dave Burke March 21 email:

o For Completion-Cause of no-match or no-input-timeout, do we still get NLSML results with the <nomatch> or <noinput> elements? Not explicitly called out anywhere.
