we may want a form of GET-PARAMS which fetches session-independent server information. One way to do this is to define a MRCPv2-frag content type (like we have with sipfrag). That way a SIP OPTIONS to an MRCPv2 server can return an MRCP-specific body with all that interesting information about server capabilities.

See <http://www.ietf.org/mail-archive/web/speechsc/current/msg01387.html> for discussion
