**Resolution:** The suggestion to remove the message length altogether is deferred because this is not a [Priority 3](#) issue according to <http://www1.ietf.org/mail-archive/web/speechsc/current/msg01755.html>. However, a note will be added to the draft indicating that inefficiency of computation may be avoided or reduced by printing the message-length token as a fixed-length integer that is zero-padded in front. Incorrect values for the message-length field in the examples may be corrected as time permits in this or later drafts.

The discussion and history of this issue can be found in the thread beginning with <http://www1.ietf.org/mail-archive/web/speechsc/current/msg01722.html>.
